INTRODUCTION

- Managing the present and future goals.
- Financial planning is the process of planning, accessing, setting, reviewing your financial goals for future as well as present terms.
- Its not only about the investment criteria or the building wealth portion but also to maintain and setting up everyday spending limit, planning for retirement, setting up home loans, planning for a family, planning for children's education, setting up life insurance, accessing the amount of wealth that resides with oneself, making plans to achieve a certain amount of financial goal and much more. All of these facets are interconnected for a financial plan.
- Financial plans help you make more realistic plans, evaluate better alternatives and to give a thought in various perspectives and taking effective and essential decisions accordingly.

NEED FOR THE SYSTEM?

- This app helps to access the finances and make a plan accordingly in order to assist in any situation.
- Everyone has a long-term or short term goal. So there must be adequate amount of money in order to accomplish those financial futuristic goals, hence, this app help to set a proper financial goal for plotting through various courses.
- This app helps to plan your finances in accordance that it funds you in any situation whether in bad or worse unexpected situation.
- It helps to Track and monitor as well as manage the portfolio depicting the amount i ncomings and outgoings of the money invested and the amount actually withhold and the similarly the returns on it.
- It displays accurate results by neglecting the tedious mathematical calculations manually with a quick response in no time.

SCOPE OF THE SYSTEM

- The user must be able to calculate the EMI(Equity Monthly Interest).
- The user must be able to compare various loans.
- The user must be able to analyze/ manage his/her wealth.
- The user must be able to set the financial goal and plan the investment accordingly.
- The financial goals must include:
 - retirement plan .
 - children's marriage.
 - plan a house.
 - financial target.
- The user must be able to calculate the SIP(Systematic investment Planning).
- The user must be able to calculate the amount of Fixed deposit.
- The user must be able to calculate the amount of Recurring deposit.
- The user must be able to view the finance website for better investment ideas.
- The user must be able to view the live financial market.
- There must be proper visualized graphs regarding the total amount invested or received.

SYSTEM MODULES

➤Modules:

- Log In
- EMI Calculator
- Loan Compare
- Wealth Analysis
- Goals:
 - Retirement Plan
 - Children's Marriage
 - House Plan
 - Financial Target
- Systematic Investment Plan
- Fixed Deposit
- Recurring Deposit
- Investment Ideas
- Live Financial market

➤Users

- Client

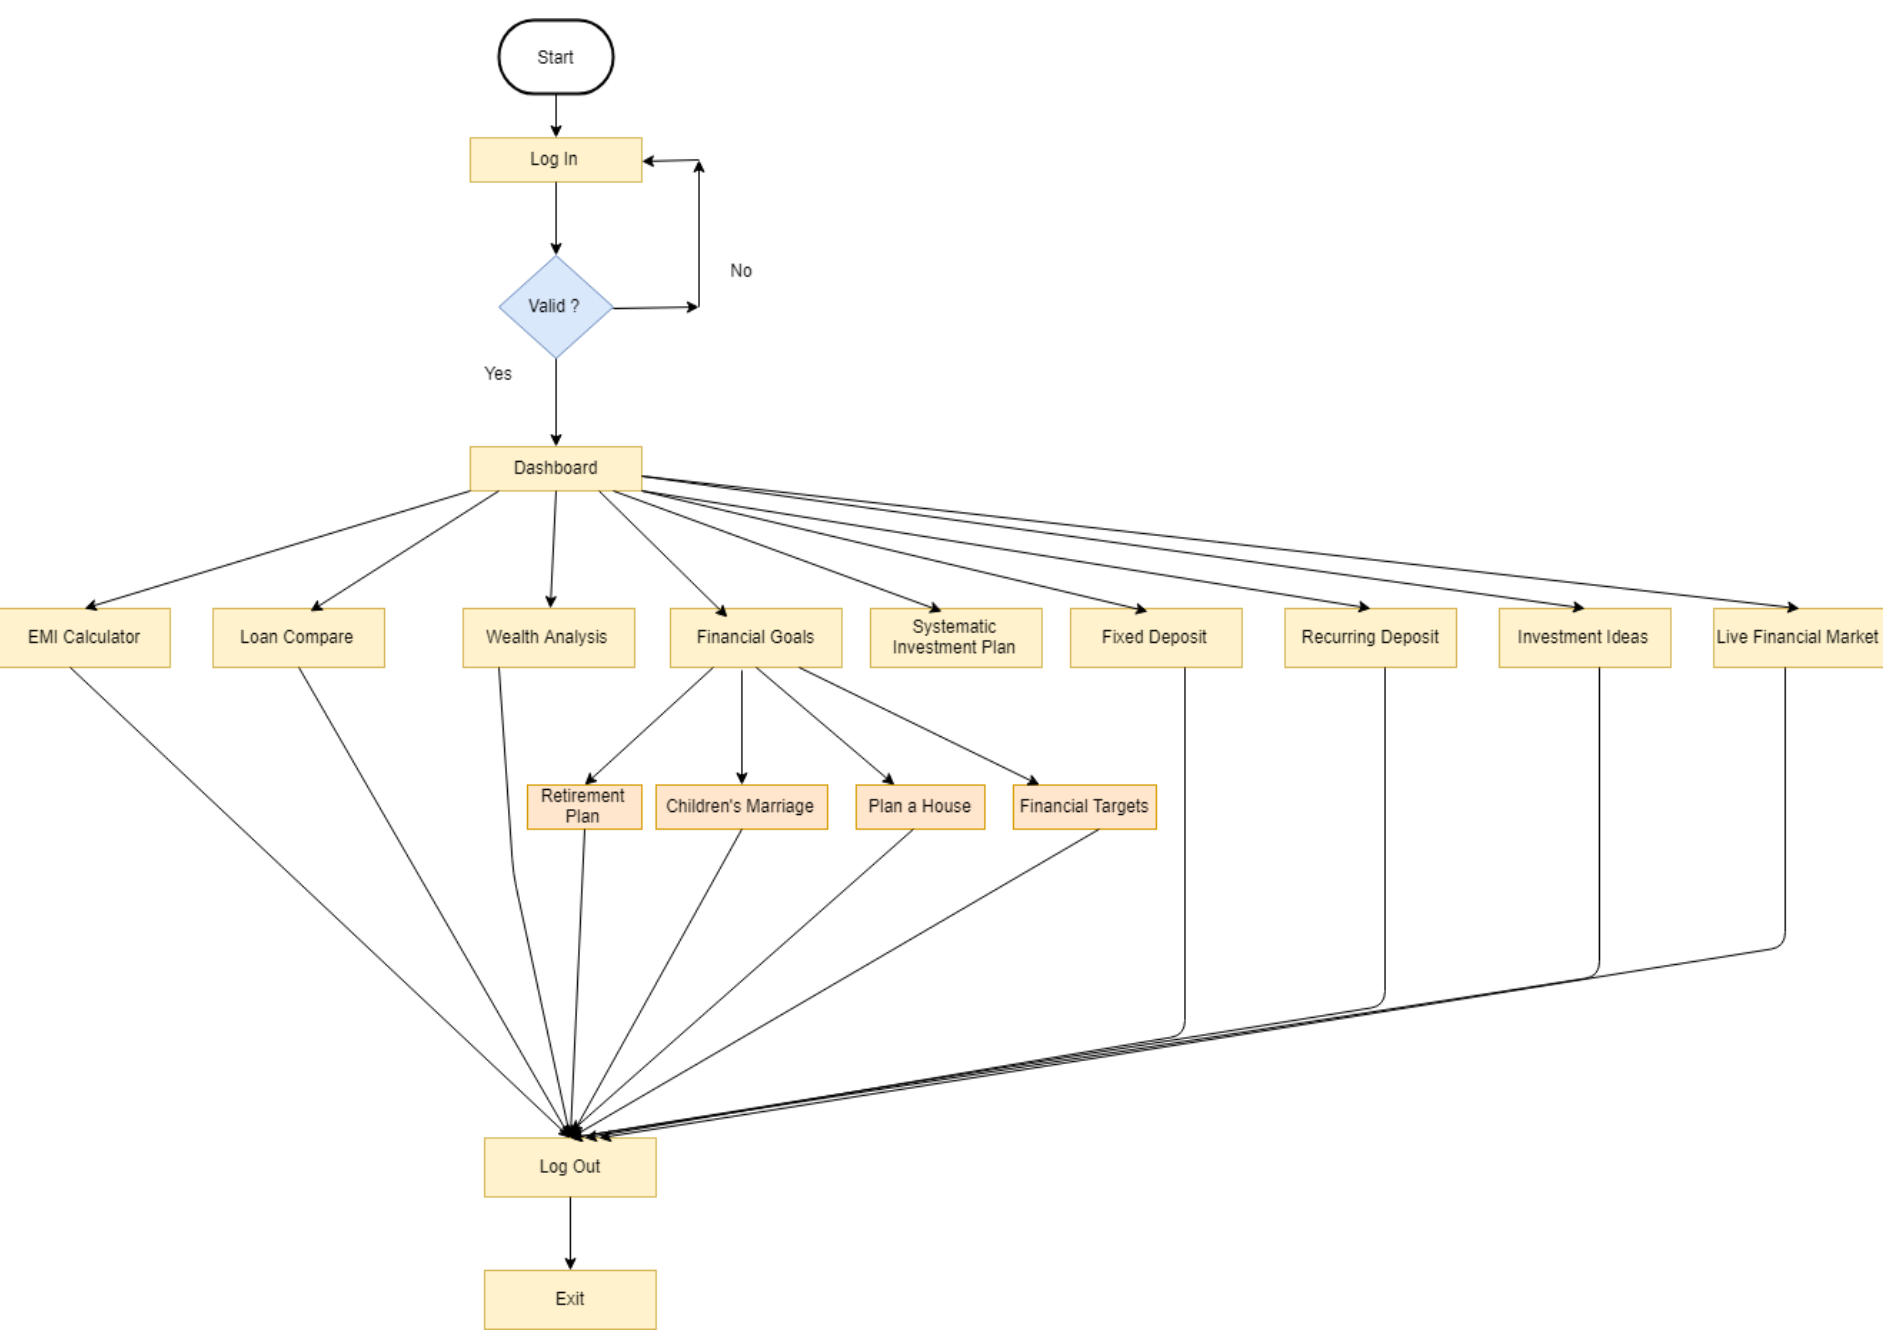

TOOLS AND TECHNOLOGIES

Tools	Android Studio
Language	Java, XML
Database	Firebase Database
Operating System	Android
Application Size	25MB

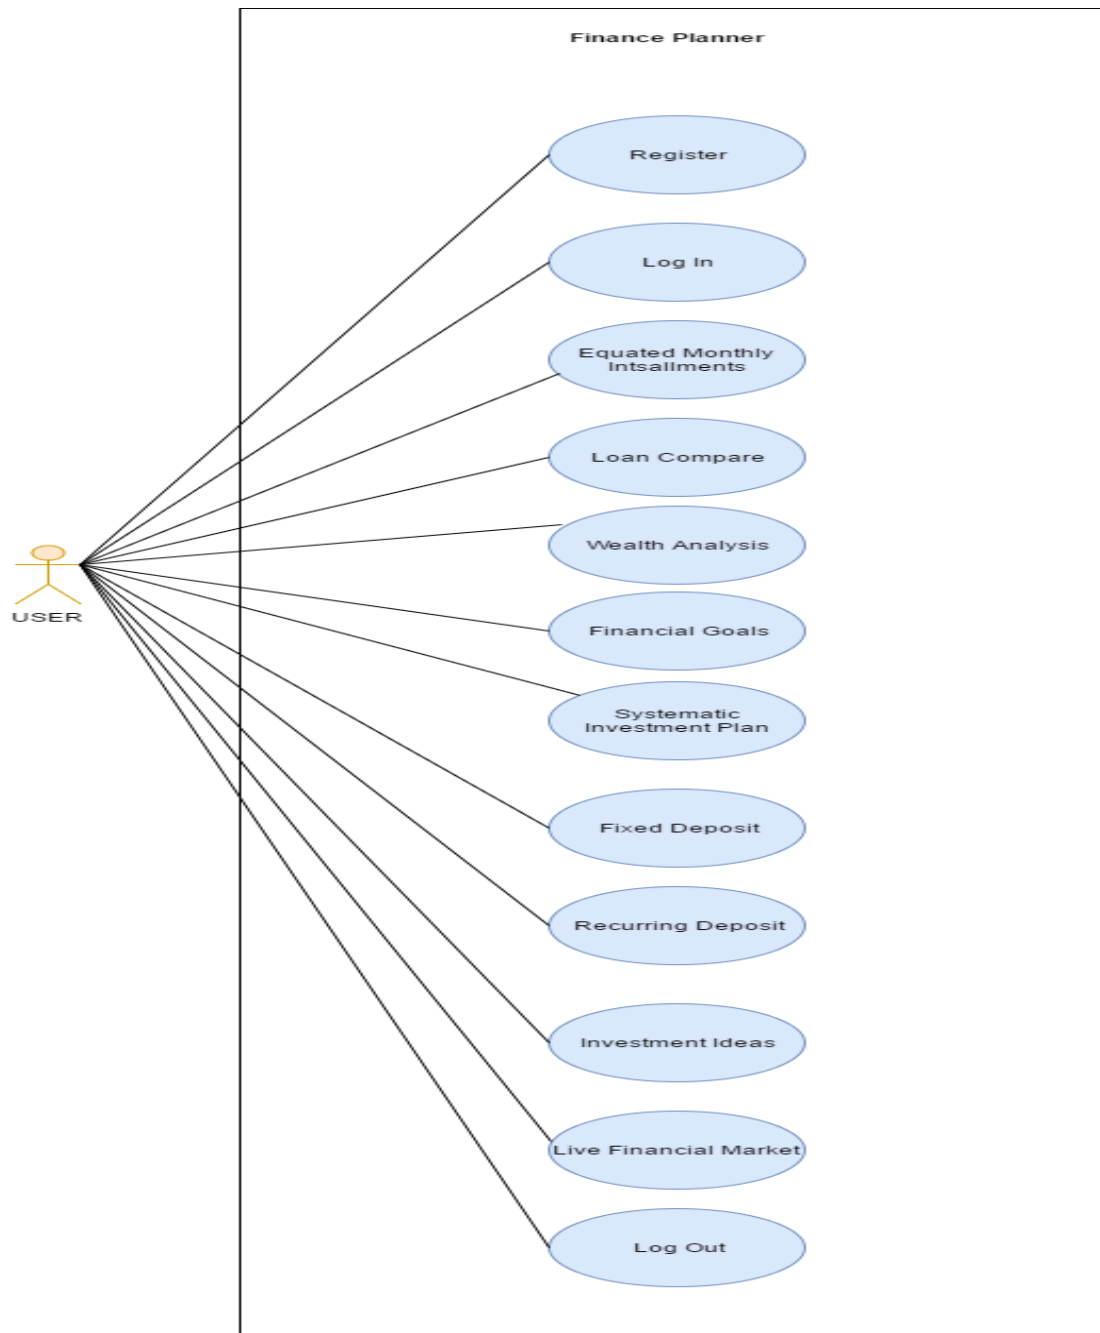

EXISTING VS PROPOSED SYSTEM

- Existing system does not have a facility of live market or direct connectivity to the web browser for investment ideas whereas proposed system has this facility for getting various investment ideas.
- Existing system does not have any facility of wealth analysis module, which provides with the information which gives out the result of much wealth you withhold in total in FD,RD and EMI respectively and how much amount of money you can actually save and need in future.

DESIGN

User Interface

Splash screen

Login screen:

The image shows a login screen for an application titled "Finance Planner". The screen has a blue header bar with the text "Finance Planner" in white. Below the header, there is a light gray background. The first input field contains the email address "riya.gupta97@gmail.com". The second input field contains six dots, indicating a password. Below the input fields, there are two buttons: "LOG IN" and "ENTER".

Finance Planner

riya.gupta97@gmail.com

.....

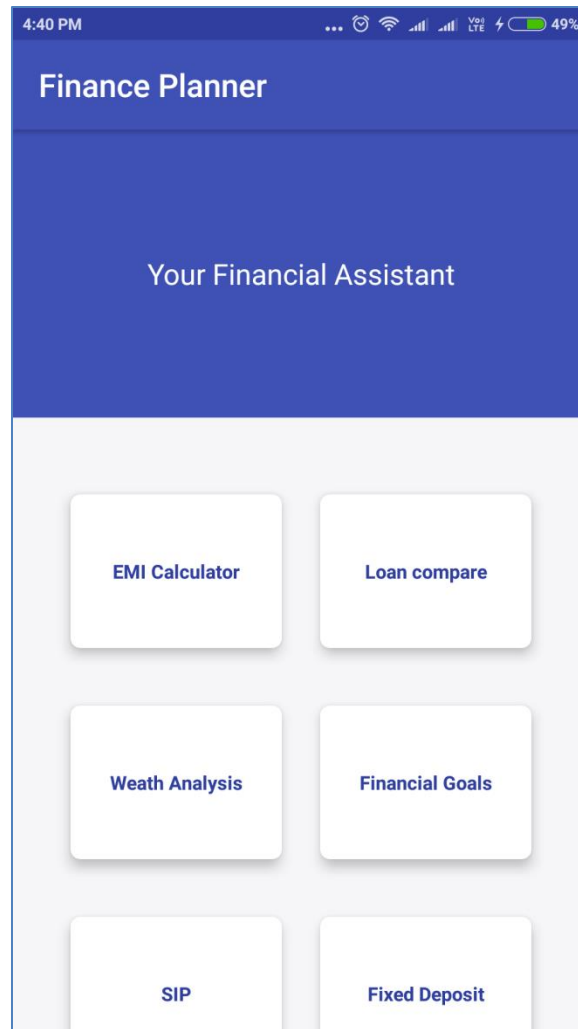

LOG IN

ENTER

Login specifications:

Data/UI elements	Data considerations	Behavior considerations
Username	Text entry field	Mandatory field. Displays the username as entered as per the specifications.
Password	Text entry field	Mandatory field. Displays the password (in encrypted format) as entered as per the specifications.
Login	Button	On users click, when the password matches the one in the database, this screen redirects it to the dashboard screen.
Enter	Button	(for temporary purpose) it will directly redirect to the dashboard screen.

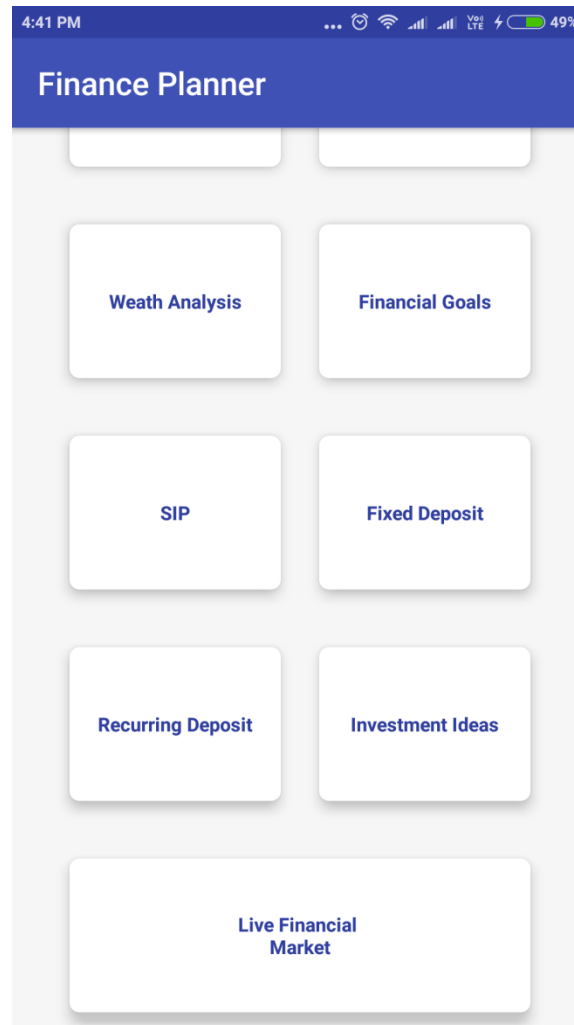

Dashboard screen-1

Dashboard Specifications:

Data/UI elements	Data considerations	Behavior considerations
Emi calculator	Cardview	On users click displays the EMI calculator screen
Loan compare	Cardview	On users click, a loan compare page open that compares 2 loans.
Wealth analysis	Cardview	On users click, it displays the analysis of wealth stored in various modules such as RD,FD.
Financial goals	Cardview	On users click, it displays a page again with 4 more modules i.e. The retirement plan, children's marriage, plan a house and financial target.

Dashboard screen-2

Data/UI elements	Data considerations	Behavior considerations
SIP	Cardview	On users click, it displays a Systematic investment planning page.
Fixed deposit	Cardview	On users click, it displays a Fixed deposit page.
Recurring deposit	Cardview	On users click, it displays a Recurring deposit page.
Investment ideas	CardView	On users click, it re-directs to a page opening a browser inside the app itself and also re-directs www.businesstoday.com
SIP	Cardview	On users click, it displays a Systematic investment planning page.

PROPOSED ENHANCEMENTS:

- There can be various features further added in order to facilitate the users in a more convenient manner. The following things can be added such as:
 - Data Storage:
 - Firebase database , to store each and every detail of every module of a particular user.
 - The daily expenses planner:
 - Where we can analyze, monitor, track the daily expenses that are incoming and outgoing for proper saving purpose and to reduce or cut off the unnecessary purchases. where we can include various categories as such as outings, food etc on which most of the money is usually spent on regular basis.
 - FAQ's :
 - An information section or a FAQ's section in order to assist the users in a convenient manner and to provide answers to their frequently asked questions.

By this it can be made more interactive, more user-friendly and fulfills the need of users in the best possible manner.

CONCLUSION

- This project is developed to nurture the needs of a user in a financial background by embedding all the tasks of various factors in accordance with the wealth in different categories. Future version of this project will still be much enhanced than the current version.
- The financial planner is an innovative tool that is fast becoming a necessity. Certain deep insights:
 - Its needed to organize the finances effectively for assisting us in leading a bright and a better future.
 - A financial planning is long-term, continuous and a dynamic process. You must plan well in order to combat the unnatural events and to achieve the goals. To be able secure yourself in various situations, different life-stages and make changes based upon the market conditions and as well as in terms of your needs and requirements to come in line with your financial planning for achieving the financial goals.
 - This app helps in calculating the finances in an effective manner by saving from the tedious mathematical calculations and by giving accurate results in no time.
- Thus the Financial planner mobile application is developed and executed successfully.
